6.0.300 Error 1 error C2664: 'HTS_String' : cannot convert parameter 1 from 'int *' to 'HTS_String &' c:\program files\helib 9.4 build 9.4.018 professional edition with source 6.0.300\stm32f746\cmsis\include\hal\hstring.h 33 18 HTS Error 2 error C2065: 'HTS' : undeclared identifier c:\program files\helib 9.4 build 9.4.018 professional edition with source

6.0.300\stm32f746\cmsis\include\hal\hstring.h 33 18 HTS Thank you for helping me, I can't find anything about this error. A: Solution is that I'm using library version for 2017.3.1 instead of 2018.0.0

Data center networks have evolved from dedicated point to point connections to a shared infrastructure of hubs and switches, a.k.a., the Internet. As data center networking has moved to a shared infrastructure, the number of servers has increased dramatically. In recent years, the number of servers in a single data center has increased from the tens to over a thousand. Additionally, the demand for Internet-based services is growing at an exponential rate, resulting in ever increasing amounts of data traffic. This trend of explosive growth and ever increasing data traffic has placed heavy demands on data center networks, which are the underlying infrastructure of the Internet. To illustrate the need for data center networks to provide more bandwidth and improve performance, it is helpful to consider the evolution of traditional Internet protocols and how they have evolved to meet the demands of today's data centers.

The original Internet was defined by the basic TCP/IP protocol suite. TCP/IP protocols were designed to provide a reliable, secure, and reliable communications infrastructure for an Internet community that consisted of a few thousand host computers.

As the Internet grew to include millions of computers, the TCP/IP protocols were extended to accommodate the increased traffic. To expand the Internet into a global network, a set of IP addressing standards were adopted. IP addresses are now in the trillions, and over 90% of these addresses are used by enterprises to provide local network access to their own computers. The growth of the Internet has been explosive 82157476af
